

Neuroscience Research Opportunity

The Nicholson Laboratory at Rush University Medical Center is now looking for motivated undergraduate volunteers who are hoping to get involved in research. The Nicholson Lab investigates the nature of cognitive aging, Alzheimer's disease, and other neuropathological disorders. They employ a combination of super-resolution microscopy, electrophysiology, and pharmacology to understand the synaptic changes that occur with aging and neurological disease. If you are interested in applying for a volunteer position in the Nicholson Lab, please send a brief email to Matthew_L_Russo@rush.edu.
